## Udder Butter Ointment

*For chapped, raw udder & teats, minor cuts, abrasions, and burns.*

Corona Udder Butter is a lanolin-enriched moisture-balancing ointment formulated to relieve the pain and discomfort of chapped, sore, raw udder and teats caused by exposure to adverse environmental or weather conditions. Udder Butter's smooth, easy-spreading formula lubricates and softens painful, cracked, tender, lacerated or abraded udder and teats. Massaged into the afflicted areas, Udder Butter eases the discomfort of sensitive, inflamed skin and helps restore moisture balance to painful, parched surfaces, thereby providing comfort and healthy suppleness. Soothing Udder Butter encourages natural healing.

Ingredients
Oxyquinoline 0.22% in a base of Petrolatum. Also contains Caster Oil, Fragrance, Lanolin, Neatsfoot Oil, and Solubilizer.

Directions
As is normal in pre-milking sanitation, wash teats and udder thoroughly before milking to avoid residues in milk. After milking, gently bathe with hot water, thoroughly strip out milk, pat surface dry with clean towel and spread Udder Butter generously over the afflicted area, letting the emollients remain to soothe, soften, and protect. Continue to use routinely as described, applying as needed until condition is alleviated, rawness and chapping are relieved, resiliency and comfort of teats and udder are restored.

Caution
If condition persists or become worse, or in case of deep wounds, or serious burns, consult your veterinarian.
