Baiting Tips

• Place bait and bait stations around the exterior of your building every 50-100 feet
  - Closer in high pressure areas
  - Spaced out between buildings

• Intercept rodents before they get inside your building!

• The investment in setting up a preventative program outside is better than fighting an ongoing infestation inside the building.
Baiting Tips

- Secure chunx on vertical bait securing rods inside the station.
- If bait can be shaken from bait stations when they are lifted, units must be secured or otherwise immobilized.
- Secure bait stations with: stakes, duckbills, patio blocks, chains or u-bolts.
