Noromycin® 300 LA (oxytetracycline 300 mg/mL) is a versatile, broad-spectrum antibiotic that is economical and available without a prescription. Its unique oxytetracycline formulation delivers the results you can depend on in a convenient lower dose volume.

Indications:
Noromycin® 300 LA is a sterile ready-to-use solution of broad-spectrum oxytetracycline 300 mg/mL for use in beef cattle, non-lactating dairy cattle, calves, pre-ruminating (veal) calves and swine. Oxytetracycline is effective in the treatment of a wide range of diseases caused by susceptible gram-negative and gram-positive bacteria.

 observers label directions and withdrawal times. Not for use in lactating dairy animals. Adverse reactions, including injection site swelling, restlessness, ataxia, trembling, respiratory abnormalities (labored breathing), collapse and possibly death have been reported. See product labeling for full product information.

Noromycin® 300 LA Offers These Benefits:
- Proven efficacy across a wide range of diseases
- A convenient lower dose volume for easier administration
- Non-prescription. Available from animal health suppliers
- A well-tolerated formulation, particularly when administered subcutaneous (SQ) in the neck area
- Uncompromising quality control from Norbrook Laboratories — the worldwide leader in oxytetracycline production
- Economical
- Convenient 100 mL, 250 mL and 500 mL bottles
**INDICATIONS:**

For Use in Beef Cattle, Non-lactating Dairy Cattle, Calves, Including Pre-ruminating (Veal) Calves and Swine.

**DOSAGE:**

- 0.7 mL for calves weighing 10 lb or less.
- 1.0 mL for calves weighing from 10 to 25 lb.
- 1.7 mL for calves weighing over 25 lb up to 500 lb.
- 3.0 mL for calves weighing over 500 lb.
- 5.0 mL for swine weighing over 500 lb.

**ADMINISTRATION:**

- Intramuscular injections should be made by directing the needle of suitable gauge and length into the fleshy part of a muscle mass. Excessively large muscles, such as the flank of swine, should be avoided. Intramuscular injection site should be reduced according to age and body size so that 1 to 2 mL per site is injected in small calves.
- Intravenous injection should be given with extreme care. The needle must be inserted along the length of the vein all the way to the upper third of the neck. A continuous flow of blood, release the choke rope by a quick pull on the loose end (See Fig. 2). In thick-necked animals, a temporary snub can be made around the neck. First, insert the needle through the hide. Second, insert the needle into the vein. If blood appears in the syringe, a blood vessel has been entered; withdraw the needle and select a different site.

**ANTIBIOTIC**

Oxytetracycline Injection 300 mg/mL

**PRECAUTIONS:**

- Use extreme care when administering this product by intravenous route. The needle should be inserted along the length of the vein all the way to the upper third of the neck. A continuous flow of blood, release the choke rope by a quick pull on the loose end (See Fig. 2). In thick-necked animals, a temporary snub can be made around the neck. First, insert the needle through the hide. Second, insert the needle into the vein. If blood appears in the syringe, a blood vessel has been entered; withdraw the needle and select a different site.

**ADVERSE REACTIONS:**

Reports of adverse reactions associated with oxytetracycline administration include injection site swelling, pain or lameness associated with swelling at the injection site. Subcutaneous injection in the neck area may cause swelling at the injection site. Intramuscular injection in the rump area may cause mild temporary hemoglobinuria resulting in darkened urine.

**WARNING:**

For swine weighing 25 lbs of bodyweight and under, NOROMYCIN 300 LA is to be administered intramuscularly, subcutaneously or intravenously at a level of 5 mg per pound of bodyweight per day. In treatment of foot-rot and advanced cases of other indicated diseases, a dosage level of 5 mg per pound of bodyweight per day is recommended. Treatment should be continued 24 to 48 hours following remission of the indicated condition. NOROMYCIN 300 LA is available in 100 mL, 250 mL and 500 mL vials.

**STORAGE:**

Preserve in a cool dry place. Do not freeze. NOROMYCIN 300 LA may be stored at room temperature for 28 days. NOROMYCIN 300 LA is made in the UK.
