Parvovirus Vaccine
Killed Virus

For vaccination of healthy breeding swine as an aid in preventing disease caused by PPV, *E. rhusiopathiae*, *Leptospira canicola*, *L. grippytyphosa*, *L. hardjo*, *L. icterohaemorrhagiae* and *L. pomona*. An 18-week duration of immunity following vaccination has been demonstrated against erysipelas.

Directions: Shake well. Aseptically administer 2 mL intramuscularly. Administer two 2-mL doses to healthy sows, gilts and boars according to the enclosed directions. Revaccination with a single dose is recommended prior to subsequent breedings. **See enclosed leaflet for complete directions and precautions. Véanse las instrucciones completas el inserto.**

Precautions: Store at 2°-7°C. Do not freeze. Use entire contents when first opened. Do not vaccinate within 21 days before slaughter. Contains gentamicin as preservative. Transient injection site swelling and/or inappetence may occur following vaccination.
