

# WHY GO SOFT ON RODENTS?

## BECAUSE IT'S THEIR FAVORITE LAST MEAL.

Q: What is soft bait?

A: A soft bait has a dough like consistency. *FastDraw*, *Revolver*, or *Cannon* rodenticides are soft baits.

*FastDraw* and *Revolver*, anticoagulant soft bait rodenticides, start to work in 4 - 5 days after consuming a lethal dose. While for *Cannon Soft Bait*, an acute rodenticide, the first dead rodents appear in as little as 48 hours after consuming a lethal dose.

*FastDraw*, *Revolver*, or *Cannon* soft bait fit in hard to reach places where rodents live and breed.

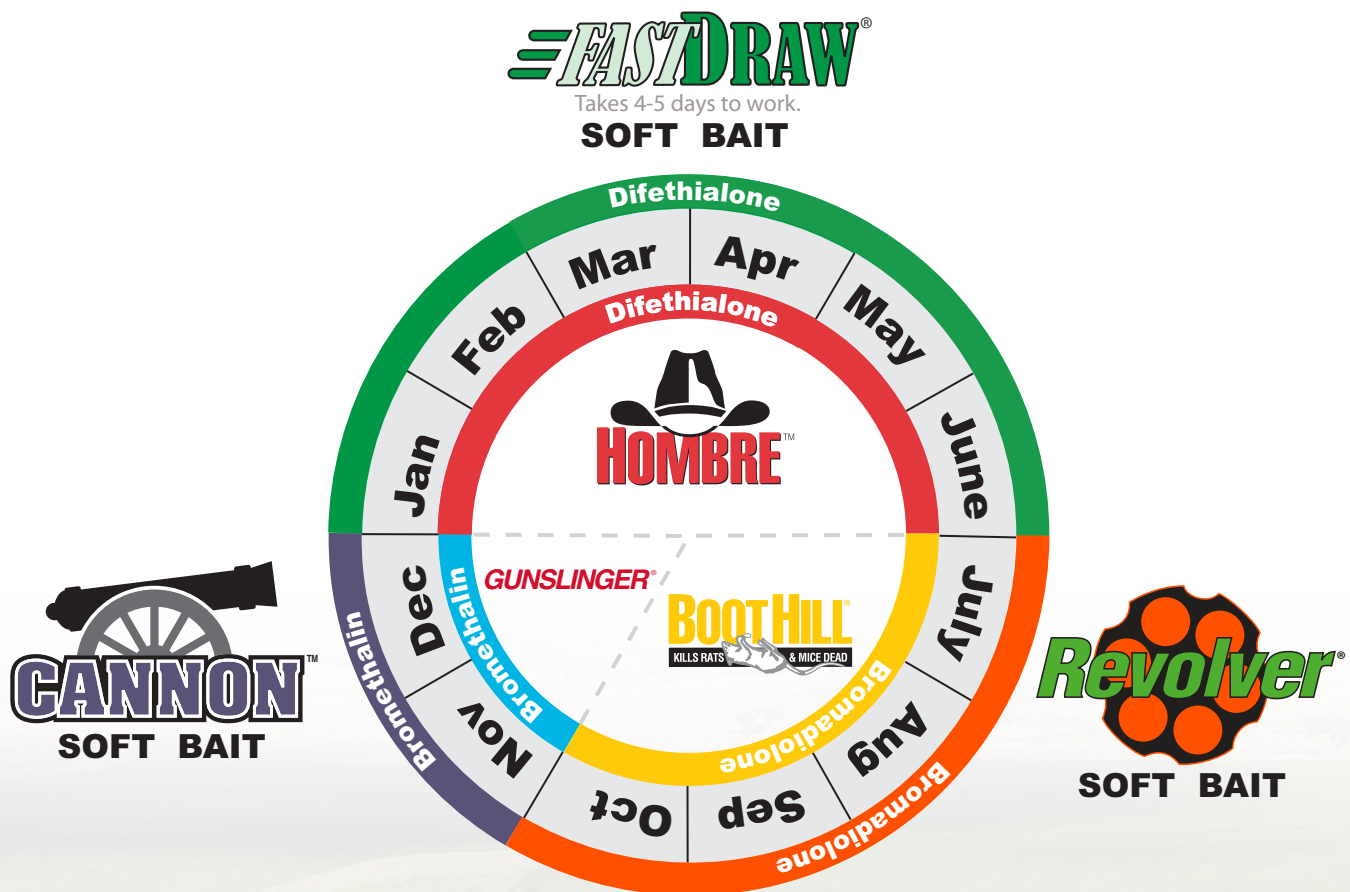

-  *Use in place of wax blocks or pellets*
-  *Rodents readily accept soft bait*
-  *Premeasured doses for convenient use*
-  *Pouches fit in hard to reach places*
-  *Easy-to-use*

# INTEGRATORS ARE RAPIDLY MAKING THE SWITCH!
