

Caring. Dependable. Durable.

## TD-30 TEMPERATURE CONTROLLER

The TD-30 Temperature Controller is a thermostatic control device designed for safe and effective heat mat surface temperature management.

The control allows users to select and maintain the ideal temperature for various species of Animals/Pets/Reptiles.

This state of art controller will maintain any pre-selected temperature up to 150°F. This controller incorporates several unique self-activated safety mechanisms.

One unique safety mechanism is our limit setting that self-activates and is relative to the set point. It has a fixed 2°F switch differential for energy savings. Standard features include capacitive touch buttons, Modbus® communication and temperature alarms with internal buzzer.

Note: The TD-30 has the same connection as the HMT-350.
