

## Why Bait Rodent Burrows?

- ▶ Because it's often the best way to control Norway rats, which are natural burrowers
- ▶ To minimize exposure to people, pets and non-target animals
- ▶ To maximize control of rodents by baiting the areas where they live
- ▶ To allow for management of the burrow system long-term with accurate follow-up and monitoring
- ▶ Burrow baiting is an integral part of a successful Rodent Control Program

## Steps for Successful Burrow Baiting

Create a 3 ft. "Sterile Zone" by removing all equipment, debris, trees, shrubs, and tall grass from around the building.

- ▶ Place loose pellet bait down active burrows with a long handled spoon. See label instructions for placement.

- ▶ Wait no longer than a week, then kick to close in the burrows.

- ▶ Check the burrows the next day to see if burrows are reopened. If necessary continue the baiting & closing process until all activity ceases.
- ▶ Continue monitoring monthly to ensure no additional rats move in.
- ▶ Utilize Motomco's Bait Rotation Program for maximum results.

## Tips from the Pros

- ▶ Use only loose bulk pellets or meal for burrow baiting. Rats are neophobic and will likely push chunks or place-pacs out of burrows where pets and children may find them.
- ▶ For large infestations with extensive burrow systems, plow under all burrow openings to determine which ones are active before baiting.
- ▶ For a long-term, integrated approach to rodent control, it is best to place rat bait stations every 15 to 30 feet around the exterior perimeter of the building and monitor regularly.

## Baiting at Clean Out

- ▶ Clean Out is an ideal time to bait for rodents because all animals are out of the facility
- ▶ Knockdown infestations while areas are in transition
- ▶ Meal Bait can be placed in egg flats or feed pans and then placed every 15-30 ft for rats
- ▶ Clean up any spilled feed, manure or unused bait before re-introducing animals to an area
- ▶ Keep good records and replenish bait daily until activity slows down or ceases

## Recommended Products for Clean Out & Burrow Baiting

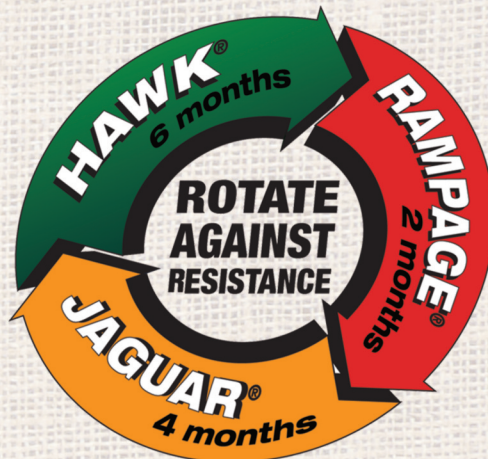

- ▶ Meal Bait and Pellets can be incorporated into an annual Bait Rotation Program

31125 - 25lb. Pail & 31111 - 50lb. Pail  
Active: Bromadiolone (anticoagulant)

22925 - 12lb. Pail  
Active: Bromethalin (acute)

31155 - 12lb. Pail Loose Pellets  
Active: Bromadiolone (anticoagulant)

22112 - 12lb. Pail Loose Pellets  
Active: Bromethalin (acute)

31402 - 12lb. Pail Loose Pellets  
Active: Brodifacoum (anticoagulant)
